Download Ebook Biology 12 Circulatory System Study Guide

The human circulatory system functions to transport blood and oxygen from the lungs to the various tissues of the body. The heart pumps the blood throughout the body. The lymphatic system is an extension of the human circulatory system that includes cell-mediated and antibody-mediated immune systems. The components of the human circulatory system include the heart, blood, red and white blood cells, platelets, and the lymphatic system.

Human Circulatory System

The human circulatory system which is also known as blood vascular system comprises muscular chambered heart, a network of closed branching blood vessels and fluid in the form of blood. Blood vessels – Arteries, Capillaries, and Veins. Arteries can carry blood from the heart to the of the parts of the body. Veins can carry blood from organs to the heart.

Human Circulatory System | GCSE Biology Revision Notes

The circulatory system Blood is pumped away from the heart at high pressure in arteries, and returns to the heart at low pressure in veins. The human circulatory system is a double circulatory system.
