Dermatoscopy In Clinical Practice Second Edition Beyond ...

The use of a dermatoscope in clinical practice has been shown to increase diagnostic accuracy and is considered the standard of care in assessing patients with pigmented skin lesions. Its use is also being increasingly applied to the diagnosis of nonpigmented skin lesions. Like any clinical tool, training is required for effective use.

RACGP - Dermatoscopy in routine practice – ‘ Chaos and Clues ’

Dermatoscopy: Alternative uses in daily clinical practice. Dermatoscopy, also known as dermoscopy, epiluminescence microscopy, or surface microscopy, is a noninvasive technique allowing rapid and magnified (× 10) in vivo observation of the skin with the visualization of morphologic features often imperceptible to the naked eye. Videodermatoscopy (VD) represents the evolution of dermatoscopy and is performed with a video camera equipped with lenses providing higher magnification (× 10 to × 1000).
