Electromagnetic fields (EMF) of all frequencies represent one of the most common and fastest growing environmental influences, about which anxiety and speculation are spreading. All populations are now exposed to varying degrees of EMF, and the levels will continue to increase as technology advances.

One of Koch's collaborators, György Buzsáki was fairly clear as far back as 2004 in terms of where he stood on this debate, highlighting various functions that the brain's electromagnetic fields perform, including linking different areas of the brain together, facilitating synaptic changes, and creating and consolidating memory. So Buzsáki accepts that these fields have functional roles ...

An electromagnetic field is a classical field produced by moving electric charges. It is the field described by classical electrodynamics and is the classical counterpart to the quantized electromagnetic field tensor in quantum electrodynamics. The electromagnetic field propagates at the speed of light and interacts with charges and currents. Its quantum counterpart is one of the four fundamental forces of nature The field can be viewed as the combination of an electric field and a magnetic field
