Get Free Embodied

Embodied energy is the energy consumed by all of the processes associated with the production of a building, from the mining and processing of natural resources to manufacturing, transport and product delivery. Embodied energy does not include the operation and disposal of the building material,

Embodied

defines "embodied energy" as "the sum of the energy requirements associated, directly or indirectly, with the delivery of a good or service" (Cleveland & Morris, 2009). In practice however there are different ways of defining embodied energy depending on the chosen boundaries of the study.
