Some VPLEX commands to show useful information on the VPLEX CLI can be cumbersome, long and hard to remember. VPLEX Engineering have provided a set of alias commands to set up easy to issue and easy to remember shortcut commands for show and set VPLEX CLI commands. VPLEX employs a Linux-based CLI therefore to simply list commands for example listing the storage arrays connected to VPLEX you would have to issue the following on the VPLEX CLI:

A VPLEX cluster is configured with all VS6 engines or all VS2 engines in single, dual or quad options. VPLEX for All-Flash is an all-inclusive solution with a software license for any capacity on one or multiple Dell EMC all-flash arrays. VPLEX for All-Flash is available with VS6 or VS2 engines (models cannot be combined in a cluster).

[DELL EMC VPLEX HARDWARE FAMILY](#)

If you have a clustered Vplex Metro systems, the Vplexcli-init file will need to be updated on the management server at both Vplex cluster-1 and 2. You can define your own aliases for commands that you use frequently. EMC supplies the showarrays alias, and aliases for commonly used commands, in a rar file. See the EMC documentation for details. If you define the alias yourself as above it will work, but will not survive a management server reboot.

[SAN Virtual \ EMC VPLEX](#)

VPLEX supports both EMC storage arrays from other storage vendors, such as HDS, HP, and IBM. VPLEX supports operating systems including both physical and virtual server environments with VMware ESX and Microsoft Hyper-V. VPLEX supports network fabrics from Brocade and Cisco, including legacy McData SANs.
