A radiant system heats or cools an indoor space by circulating a fluid, generally a water/glycol mixture, through a network of PEX pipe. In a radiant heating application, a heat source (condensing boiler, geothermal heat pump, etc.) warms a fluid. A pump circulates the fluid through the heat source and out to the area you are heating.

Fasten the wire mesh tightly to oor to prevent the oating of tubing. Attach the tubing to the wire mesh using In oor wire ties (#26001) or plastic ties (#26005). When 1” or thicker insulation is installed over the existing con- crete sub oor, In oor screw clips (#26015) may be used.

*DESIGN & INSTALLATION GUIDE - Infloor Heating Systems*

The staple-up radiant floor installation method is very popular because as long as you can see the joists from below, you can install radiant heat. This method works well for new construction and retrofits. In fact, it works so well that it has almost entirely replaced the thin suspended slab applications (see below).
