Regulations on supplements Dietary supplements are products that are intended to supplement your diet. They're available in a variety of forms, including tablet, capsule, liquid, pill, and powder...

**How to Read Supplement Labels Like a Pro**

If you choose to take vitamin D supplements, 10 micrograms a day will be enough for most people. Do not take more than 100 micrograms (4,000 IU) of vitamin D a day as it could be harmful. This applies to adults, including pregnant and breastfeeding women and the elderly, and children aged 11 to 17 years.

**Vitamins and minerals—Vitamin D—NHS**

Use of supplements contributes substantially to total vitamin and mineral intakes at the population level. 13 Intake of vitamin B 6, thiamin, and riboflavin among US adults is at least five times higher from supplements than from foods, and intakes are 15 to 20 times higher for supplements for vitamins B 12 and E. 6 Consequently, supplement use considerably reduces the proportion of the general population with inadequate nutrient intake (box 1).

**Health effects of vitamin and mineral supplements | The BMJ**

Consequently, numerous agencies and scientific organizations have developed recommendations for vitamin D supplementation and guidance on optimal serum 25(OH)D concentrations. The bone-centric guidelines recommend a target 25(OH)D concentration of 20ng/mL (50nmol/L), and age-dependent daily vitamin D doses of 400-800IU.

**Vitamin D supplementation guidelines—PubMed**

The largest clinical trial, VITAL, to investigate the effects of vitamin D supplementation on the primary prevention of cancer in the general population gave 50 mcg (2,000 IU)/day vitamin D 3 supplements with or without 1,000 mg/day marine omega-3 fatty acids or a placebo for a median of 5.3 years . The study included 25,871 men aged 50 years and older and women aged 55 years and older who had no history of cancer, and most had adequate serum 25(OH)D levels at baseline.

**Vitamin D—Health Professional Fact Sheet**

Vitamin D and Omega-3 Trial-Depression Endpoint Prevention (VITAL-DEP) was an ancillary study to the VITAL (Vitamin D and Omega-3 Trial) parent trial and tested the effects of high-dose daily vitamin D 3 supplementation on 5-year depression outcomes among 18 353 middle aged and older adults without depression at baseline. 15 The primary outcomes were the total risk of depression (total ...

Vitamin D helps to control the amount of calcium and phosphate in our bodies. Both are needed for healthy bones, teeth and muscles. Vitamin D is found naturally in a small number of foods, including oily fish, red meat, liver and egg yolks. It's also found in fortified foods like breakfast cereals and fat spreads.

**The new guidelines on vitamin D—what you need to know—NHS**

Read more about vitamin D and sunlight. The Department of Health recommends that: Babies from birth to 1 year of age who are being breastfed should be given a daily supplement containing 8.5 to 10 micrograms (µg) of vitamin D to make sure they get enough. This is whether or not you're taking a supplement containing vitamin D yourself.

**Vitamins for children—NHS**

Vitamin D supplement. From around late March or early April until the end of September, most people can get all the vitamin D they need through sunlight on their skin and from eating a balanced diet. However, during the autumn and winter, you need to get vitamin D from your diet because the sun is not strong enough for your body to make vitamin D.

**Do I need vitamin supplements?—NHS**

Treating vitamin B12 or folate deficiency anaemia. Most cases of vitamin B12 and folate deficiency can be easily treated with injections or tablets to replace the missing vitamins. Vitamin B12 supplements are usually given by injection at first. Then, depending on whether your B12 deficiency is related to your diet, you'll either require B12 tablets between meals or regular injections.
