The ethical status of embryo adoption, or heterotopic embryo transfer, remains an active debate within Catholic moral theology. Opponents of the practice compare the act of embryo adoption to surrogacy or extramarital procreation, and the debate is framed around the question of whether it is morally licit for a woman, married or unmarried, to gestate a genetically unrelated embryo in her uterus.

The embryo has to be thawed, transferred, and carried to term with a final destination. Otherwise, the embryos could be carried to term and sold for the highest bidder. Children would in turn become commodities for the next willing parent. Embryos deserve the same care as other children up for adoption. Therefore they must have a home to go to.

The analysis of the morality of embryo adoption (or 'prenatal adoption') is similar to that of surrogate motherhood. Both types of acts involve the transfer of an embryo to the womb of a woman who is not the mother of the child. Both acts are directed at the good moral object of giving life to an innocent and very young human person.

## Embryo Adoption: a moral option for infertile Catholic spouses

Critics argue that the administration is using the embryo adoption program to confer upon the embryo the rights of a fully developed person, as if it were a baby. Much of this argument stems from the use of the term "adoption." How, critics argue, can one "adopt" a 6-celled embryo as if it were the equivalent of a child?

The idea of a woman taking the embryo of another into her womb provokes disdain among those who find this an infringement on the sanctity of marriage, while the proponents of embryo adoption argue that the sanctity of human life, and the innocence of the victim of this cruel fate, obliges us to take heroic action.

The strength of this collection of essays is its careful consideration, from a variety of perspectives within the Catholic tradition, of the practice of embryo adoption. It approaches the question in an open and reasonable way by allowing proponents of diverse positions within the tradition. This method both sheds a great deal of light on the particular question and at the same time introduces the reader to the relevant general principles that guide Catholic moral thought.

Pluripotent stem cells have the potential to revolutionize treatment options for a range of diseases and conditions. This book presents recent advances in our understanding of the biological mechanisms of stem cell self-renewal, reprogramming and regeneration. Also covered are novel methodological advances in the culture, purification and use of stem cells, as well as the ethical and moral dilemmas of embryo donation and adoption. These advances will shape the utilization of stem cells for future basic and applied applications.

It seems at times unthinkable that a book like this would have to be written, although, I am relatively sure that Aldous Huxley foresaw its necessity, when he wrote *Brave New World*. But, the time has arrived where babies are manufactured in sterile facilities and tested for their fitness for life in the world. While we have not yet advanced sufficiently in biological sciences to entirely forego natural gestation in favor of prenatal programming process which Huxley describes, we have reached the point where those unwanted embryos are: set aside; freeze dried; and abandoned or destroyed when they do not meet the standard set for a child. This book affirms the intrinsic goodness of the life of each embryo and explores from the Catholic perspective the possibility of frozen embryo rescue by adoption. It looks at those arguments, which see the elements of in vitro fertilization as so contrary to the faith and the natural law as to be irrecoverably intrinsically evil, and rejects those in favor of a small and narrow path of adoption to fully re-incorporate a child, through the love of a mother and a father, into the society which abandoned it.

What should we do with the hundreds of thousands of frozen human embryos held in fertility clinics around the world? One solution would be adoption. Would such a course of action be moral? That is the question faced in this volume. The leading thinkers in Catholic bioethics divide into two opposing camps in a great debate over biotechnology, sexuality, marriage, and the right to life. Book jacket.

When John and Marlene Strege learned they wouldn't be able to have a child, they were devastated. Then Marlene asked the question that would change their lives: Can frozen embryos be adopted? The

answer not only gave them their beloved daughter Hannah, it drew all three into a political spotlight they never expected.

Hundreds of thousands of frozen embryos exist, held in stasis because parents using in vitro fertilization have completed their families without them. When scientists discovered a way to extract stem cells from human embryos for disease research and cures, those tiny lives were suddenly at risk. And Hannah, just a few months after this discovery, became the first human face of the growing resistance to this new science. In the first few years of her life, she not only sparked other parents to adopt their own "snowflake babies," but she also inspired the first frozen embryo adoption program, featured on Focus on the Family (getting a new godfather in Dr. Dobson), attended her mother's testimony in Congress, and stood at President Bush's side as he vetoed federal funding for embryonic stem cell research.

This compelling story unfolds at the intersection of faith and family, science and politics. Pro-life Christians, those who have experienced infertility or know those who have, and anyone concerned with where science can lead when moral and ethical concerns are ignored will welcome this book--and the sweet face of the baby who might never have been born.

Will procreation become just another commodity in the marketplace with "designer" sperm, ova, and embryos offered for sale? Will the attention and monies focused on the new reproductive technologies take away resources from infertility prevention, prenatal care, and adoption? If states move to regulate such practices, will this encourage widespread governmental interference in reproductive choice? How will society look at the biologically unique children who are the products of genetic manipulation--and

more importantly, how will these children view themselves? This controversial book explores the answers to these questions that are frequently being asked as the battles over reproductive technologies and freedoms become more heated and touch more people's lives. *Embryos, Ethics, and Women's Rights* examines both the clinical and personal perspectives of reproductive technologies. Experts explain and debate the growing number of procreative possibilities--in vitro fertilization, genetic manipulation of embryos, embryo transfer, surrogacy, prenatal screening, and the fetus as patient. Some of the leading authorities in the field, including John Robertson, Ruth Hubbard, and Gena Corea, address the ethical, legal, religious, social, and psychological concerns that are inherent in the issues. Essential reading for every person concerned with control over basic issues of human destiny, *Embryos, Ethics, and Women's Rights* provides unique and comprehensive coverage on the subject of technologically controlled childbearing and particularly its effects on mothers and their unborn children.

The controversies in adoption have extended across a spectrum of policy and practice issues, and although the issues have become clear, resolution has not been achieved nor has consensus developed regarding a framework on which to improve the quality of adoption policy and practice. This book is the fourth in a series to use an ethics-based framework for analyzing and resolving these complex challenges in adoption while avoiding the divisiveness that has heretofore impeded their resolution. This book raises the question of whether assisted reproduction (including sperm donation, egg donation, and embryo transfer), which may result in a child who is not genetically related to one or both parents, creates a situation that is analogous to adoption. The book examines whether the knowledge acquired in the field of adoption should be applied in the area of assisted reproduction and whether issues in adoption, such as identity, access to background information, and search, are equally applicable in the

context of reproductive technology. The chapters are: (1) "Infertility, Assisted Reproduction, and Adoption"; (2) "The Meaning of Parenthood in Assisted Reproduction and Adoption"; (3) "The Parties Served through Adoption and Assisted Reproduction"; (4) "Anonymity and Information Access"; (5) "Market Forces in Adoption and Assisted Reproduction"; (6) "Embryo Donation and Adoption"; and (7) "The Law of Adoption and Assisted Reproduction." The concluding chapter notes that the limited research in assisted reproduction has made it difficult to determine the relative risks and benefits of a number of aspects of current practice and that identifying the key issues can serve as a first step toward full discussion of the challenges faced by professionals in adoption and assisted reproduction. Questions about the dignity of the human person give rise to many of the most central and hotly disputed topics in bioethics. In *A Defense of Dignity: Creating Life, Destroying Life, and Protecting the Rights of Conscience*, Christopher Kaczor investigates whether each human being has intrinsic dignity and whether the very concept of "dignity" has a useful place in contemporary ethical debates. Kaczor explores a broad range of issues addressed in contemporary bioethics, including whether there is a duty of "procreative beneficence," the ethics of ectopic pregnancy, and the possibility of "rescuing" human embryos with human wombs or artificial wombs. *A Defense of Dignity* also treats issues relevant to the end of life, including physician-assisted suicide, provision of food and water to patients in a persistent vegetative state, and how to proceed with organ donation following death. Finally, what are the duties and prerogatives of health care professionals who refuse in conscience to take part in activities that they regard as degrading to human dignity? Should they be forced to do what they consider to be violations of the patient's well being, or does patient autonomy always trump the conscience of a health care

professional? Grounded in the Catholic intellectual and moral tradition, *A Defense of Dignity* argues that all human beings from the beginning to the end of their lives should be treated with respect and considers how this belief should be applied in controversial cases. "A Defense of Dignity provides a skillful, informed, and clear philosophical analysis, from a natural law perspective, of a range of controversial, and sometimes complex, bioethical questions concerning the beginning and end of life. Few authors approach bioethics from a natural law perspective, and few do it as well as Christopher Kaczor. The book should be of interest not only to natural law philosophers and their students, but also to anyone interested in bioethics." —John Keown, Georgetown University "Moral questions at the beginning and ending of life and controversies over liberty of conscience are among the most vexing and important issues of our day. Christopher Kaczor brings his characteristic moral seriousness and philosophical good sense to his treatment of these issues, all of which implicate the key concept of human dignity. This eminently readable collection will provide an invaluable resource for educators and students alike." —Christopher Tollefsen, University of South Carolina "Indispensable. Kaczor untangles the various meanings of human dignity to undertake a reexamination of the most serious and difficult issues in medical ethics. The book combines clarity with philosophical precision, faithfulness to Catholic teaching with a thorough engagement with critics." —J. Budziszewski, University of Texas at Austin

These questions and others are thoughtfully probed in this collection of essays, which features articles from theologians, philosophers, physicians, biomedical ethicists, and an attorney.
